

Quality Policy

Statement by the Managing Director

It is the aim of thyssenkrupp Industrial Solutions (India) Private Limited to design and construct chemical and other industrial plants, which are optimized with regard to plant safety, reliability and ecology and which can be operated to the satisfaction of our customers.

We intend to achieve this aim through an efficient and cost-effective Quality Management System, as specified by UTE, i.e. "Uhde Total Engineering" describing the systematic approach to all services rendered by us.

Our manual details our interpretation of Quality Management and the Quality Management System required for this purpose. It shows how we meet our aim and the requirements and tasks involved for this.

The Managing Director assumes the responsibility for the implementation, effectiveness and continual improvement of our Quality System and evaluates it constantly.

All our Managerial staff regard the issue of Quality as a Management responsibility. They are obliged to instruct and motivate their subordinates accordingly to ensure that the Quality Management System is effectively implemented and that all our employees are aware of their responsibility towards quality of their work.

P. D. Samudra
Managing Director
