

# Mangalore Chemicals & Fertilisers' Flare Installation Project

## Customer compliments tkIS India on successful plant performance

**Mangalore Chemicals & Fertiliser Limited** has written in complimenting the work done by tkIS India on the successful performance of their **Ammonia Tank Flare Installation project**. The flare was installed at the site of the customer's Ammonia Storage System in Mangalore at a distance of 1,000 metres from the Ammonia tank..

The engineering services contract for the project was awarded to tkIS India in 2013, when a system study conducted by MCF and tkIS India suggested the need for a Tank Flare System. The project was successfully completed and commissioned in July 2015, and has been working successfully since.

# Mangalore Chemicals & Fertilisers' Flare Installation Project

Customer compliments tkIS India on successful plant performance

MCF's Ammonia Tank and Flare Installation

tkIS India shares a long relationship with MCF. Association with the fertiliser major started in 1982 when tkIS India received the order for providing LSTK Services for the Customer's 10,000 MT Ammonia Terminal project at Mangalore. Since then tkIS India has completed a number of projects for MCF including Revamps of their Urea and DAP plants & Revamp projects for their Storage facilities. The high point of the successfully-implemented project was the award of a similar project by a Jordan-based fertiliser company, which reviewed the project - vindicating tkIS India's exacting attention to engineering and plant implementation. **Our Congratulations to the task force members!**
